SILENT SHADOW – OSINT RECONNAISSANCE REPORT

Course: Cybersecurity & Digital Forensics

Student Name: Pramuditha Thathsarani Bulathsinhala

Deadline: 28.02.2026

Target Organization: Dialog Axiata PLC

Type: Passive Reconnaissance (OSINT Only)

Target Overview

Dialog Axiata PLC is one of Sri Lanka's largest telecommunications service providers and the country's leading mobile network operator. The company was established in 1993 and is headquartered in Colombo, Sri Lanka.

In April 2013, Dialog Axiata launched its commercial 4G LTE services using 10 MHz spectrum in the 1800 MHz band, becoming the first operator in South Asia to launch a commercial FD-LTE network. The company was also the first to introduce 5G network services in Sri Lanka.

Dialog provides a wide range of services including:

- Mobile telecommunications
- Broadband internet services
- Satellite television services

The current Group Chief Executive (2017 – present) is Mr. Supun Weerasinghe.

1. Executive Summary

Dialog Axiata PLC is a major telecommunications provider in Sri Lanka offering mobile, broadband, and enterprise services. A passive OSINT investigation was conducted using publicly available sources without interacting with the organization's infrastructure.

The investigation identified multiple public subdomains, DNS configurations, employee exposure via LinkedIn, and publicly available documents containing metadata. These findings indicate potential risks such as phishing opportunities, information leakage, and increased attack surface.

No active scanning tools were used in accordance with ethical and legal guidelines.

1.1 Infrastructure & DNS Mapping

Primary Domain

dialog.lk

Subdomains Found

Using DNSDumpster / crt.sh

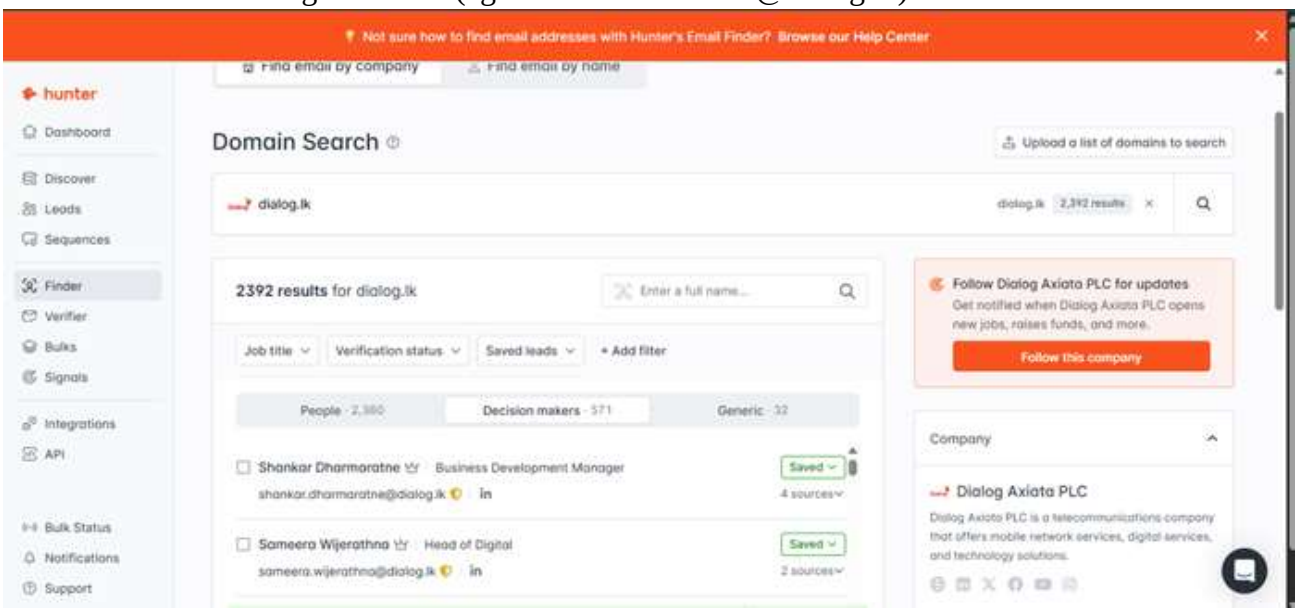
1.2 Human Attack Surface

Employees Found (LinkedIn)

Name	Role
Ranga Kariyawasam	Chief Technology Officer
Hamni Faizal	DevOps Engineer
Samodharitha Herath	DevOps Engineer
Terance Wijesuriya	Senior Software Engineer
Aneesha Mahakumara	Technical Officer

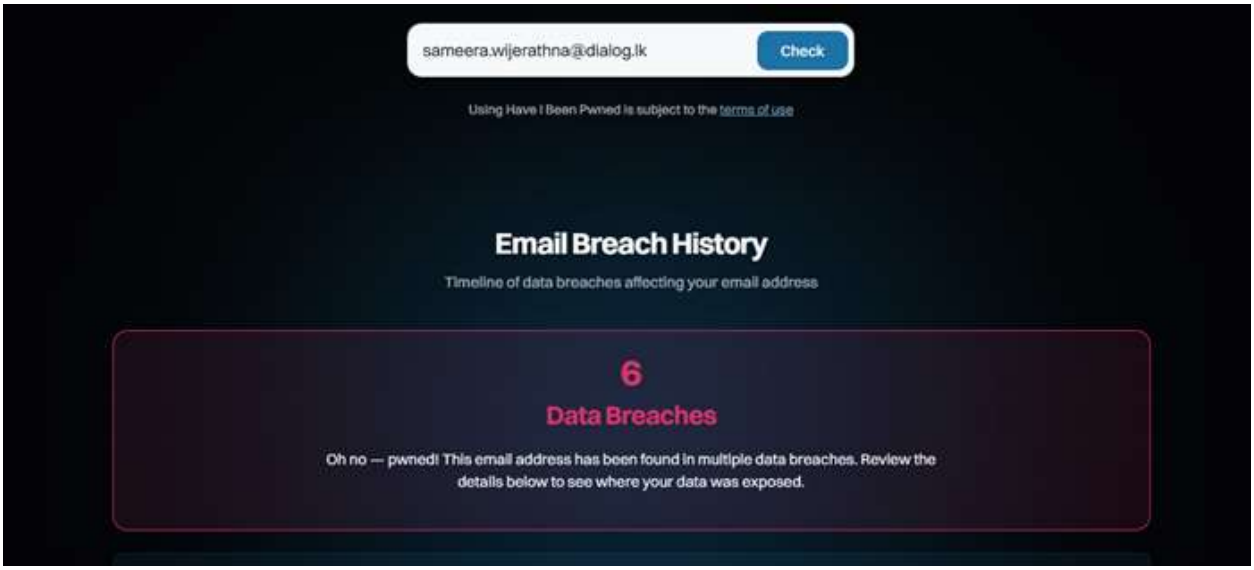
Email Pattern

Pattern discovered using Hunter.io (eg: firstname.lastname@dialog.lk)



Breach History

Checked using HaveIBeenPwned e-mail search.



Employees affected by third-party breaches

Document & Metadata Mining

Public Documents Found using Google Dorking

Metadata Extracted

Command:

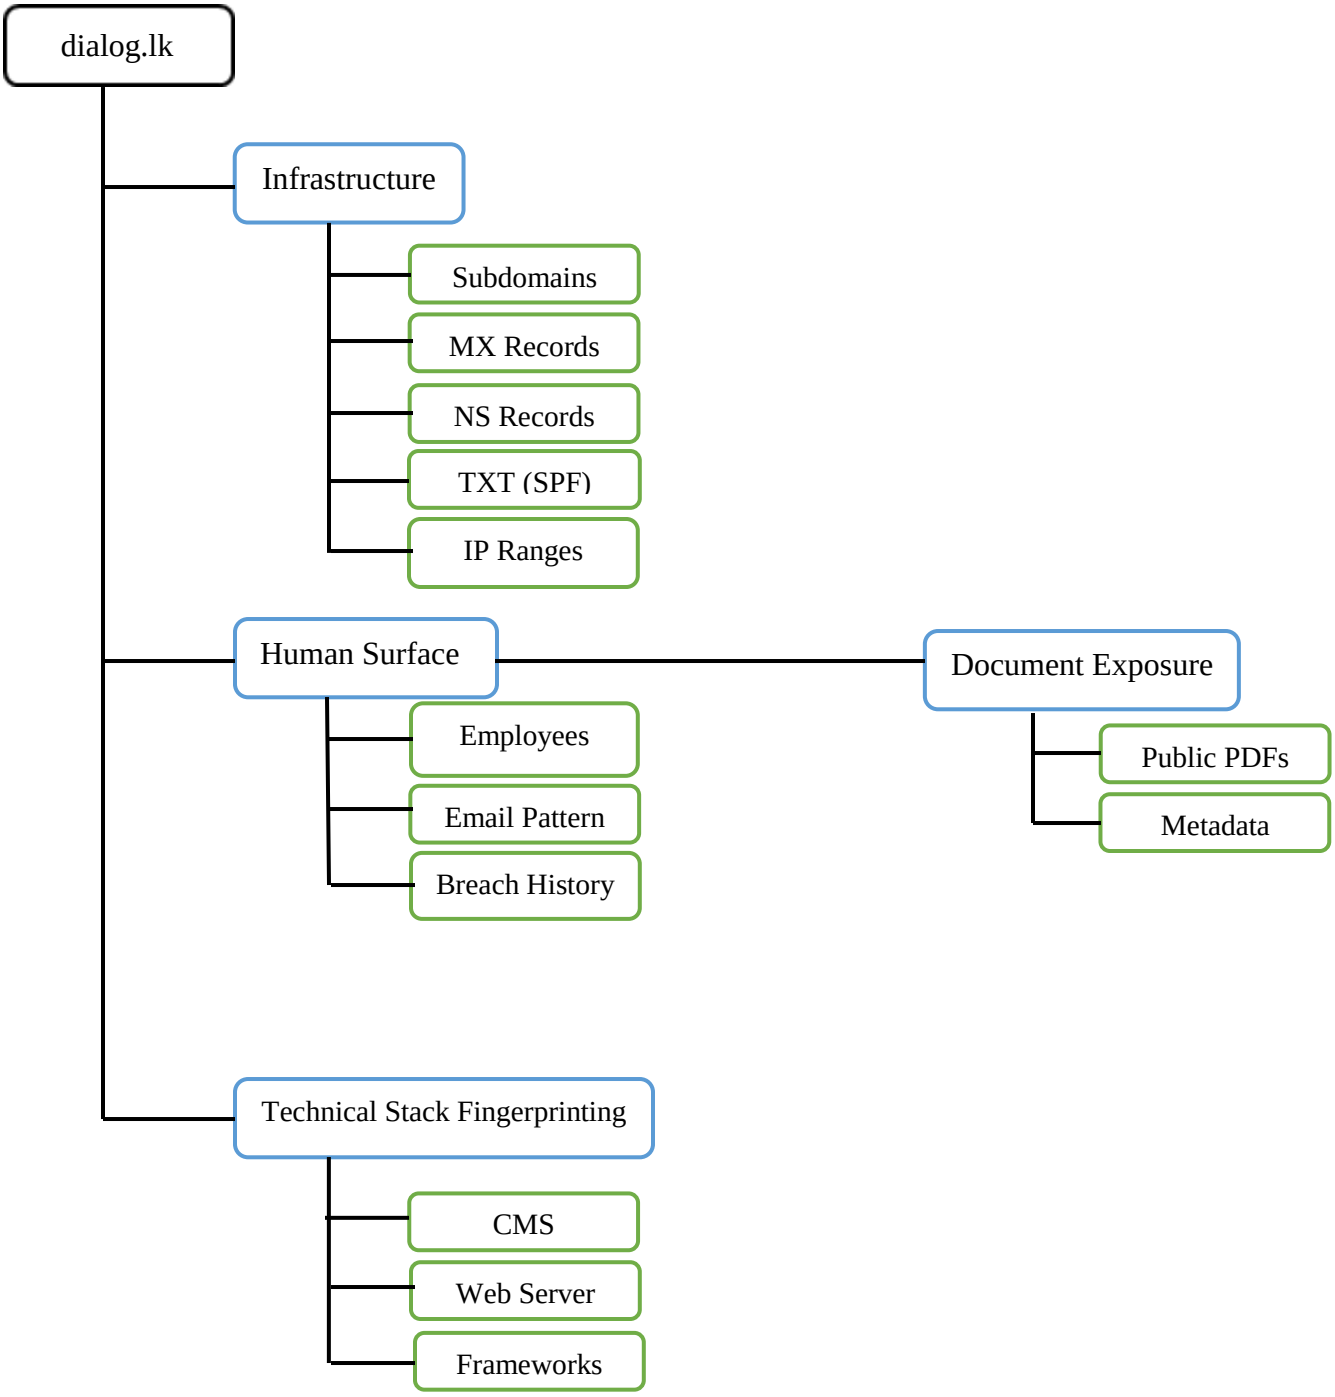
exiftool q4-quarter-2025.pdf

Technology Stack Fingerprinting

Tool used: Wappalyzer

Technology	Detected
Web Server	Nginx
Framework	Bootstrap Animate.css
CMS	Drupal 9

2. Attack Surface Map:



3. Risk Matrix:

	Finding	Risk Level	Explanation
1	Metadata exposure in financial PDF documents	Medium	Author name and document workflow details are publicly visible, increasing risk of targeted spear-phishing attacks against employees
2	Email naming convention identified through OSINT	Medium	Allows attackers to guess employee emails and perform spear-phishing or password-spraying attacks

4. Remediation:

- Train employees against phishing attacks.
- Remove metadata from public documents.
- Implement strict email security policies.

5. Log of Tools:

- DNSDumpster / crt.sh
- dig
- BGP.he.net
- LinkedIn
- Hunter.io
- HaveIBeenPwned
- exiftool
- Google Dorks
- Wappalyzer
